Question Question Pregunta	Examiner Examinateur Examinador
2a)	<p>i) An IP address is , a Internet protocol address, used to identify ONE computer when on a network. 2 marks</p> <p>ii) The relationship between the server and client in a network is the client inputs a request into the server, and the server finds information relating to the request and relays it back to the client. relationship identified, overall 2 marks</p> <p>iii) The DNS server relays the web page request to different servers, and tries to match the domain name to a web site and relays the web site back to the client. NE no reference to IP address 0 marks</p>
2b)	<p>i) A user may use more than one web browser depending on their needs, if they need speed they may use a web browser known for its speed. JE 1 mark</p>
1	<p>ii) One reason is that often times when using</p>

2b) (i) Contin... P2P networking, it can operate outside the domain name system. ^{NE} Because of this, it is difficult to identify which computer is the culprit ~~as~~ without their Domain name. ^{correct} Another Reason is that it is possible for people to hack others' internet and do illegal things under a different name. ^{NE}

1 mark

2.c Because companies are sometimes based out of various geographical locations, it is sometimes hard to make business-related files available to its staff. ^{no reason given}

Using web-based P2P networking would make this easier.

Firstly P2P networking, could allow ~~all~~ staff members from different locations to collaborate on the same project over the internet. This could allow for more ideas and opinions voiced as well as a more efficient work space. ^{not specific to P2}

Another reason it is so helpful, is that information about the business would be easily accessible to ~~every~~ the staff of the business. However, it may become ^{an issue of security as to who}

^{valid point not described well} the company is allowed to see which information as well as whether people outside the staff could be able to see or access that information. []]
