

Criterion F: Feedback from client

This interview was originally conducted in Spanish. My teacher can verify the authenticity of the translation.

Questions	Comment
Did the product you received meet your expectations?	Yes, it met them completely.
Are the designs of the forms easy to use?	Yes, they are easy. I feel that they are very wide and easy to use.
Does the report show the information you desired?	Yes, I feel that all of the information that I used in a 'manual' way before, can now be obtained by alphabetical order or type of service. I'm interested in that because it makes my job easier.
Did you like the database's layout in general? (Menu, buttons & interface) Why?	Yes. Because the codes that we use have a wide variety when adding more clients. I'm interested in that because I feel that it'll be a lot of help.
If you could change something, what would it be?	It could be, out of everything that I've seen, the only line that could be changed is where it says: "Type of payment", therefore the best option would be to change it to: "Condition of payment".

<p>Is the input of the information fast and efficient?</p>	<p>Yes, that's very fast. I feel that when someone enters the system, we're doing it in a very 'mechanic' way, it took long to input information, and to look for the clients, which was basically wasting time. While now it's very fast, and I feel it will help me a lot.</p>
<p>Is it capable of storing the amount of clients that you asked for?</p>	<p>In the new system: Yes. I feel that it has enough space with the client's code going up to 3 digits.</p>
<p>Were you able to update/edit your clients when you needed to?</p>	<p>Yes, the way to input the data is fast, because I can do it by numeric, alphabetic order, or even by the type of payment, and that helps me a lot.</p>
<p>Are you able to search clients the way you wanted to?</p>	<p>Yes, and I expected it to be only by alphabetical order, but now I see that it not only does that, but also by: types of service and the client's name.</p>
<p>If you wanted to make another database, would you trust me to do it for you?</p>	<p>Yes, I would trust you because this database is helping me in the way it was designed. Therefore I would trust you because it has helped me a lot.</p>
